Ribbons and furniture boards Complete Skin

Melaco

COMPLETE SKIN

Multi-purpose
components
chosen by furniture
manufacturers

furniture components with a wide range of applications

WILL WORK IN ANY INTERIOR

Ribbons and furniture boards Complete Skin are distinguished by their versatility. You can make them into fronts, drawer fronts, display cases, plinths of any size. They are perfect for production of kitchen, room, bathroom and office furniture. They are also used by manufacturers of public utility equipment elements for exhibition facilities and shops. The tiles are easy to process and do not require special machinery. Narrow planes can be glued by hand or on any edge banding machine, using edge bandings of the same colour supplied by Melaco and the recommended PUR adhesive.

Complete Skin furniture components are made in the HOT MELT LAMINATION wrapping technology using modern PUR adhesive systems. It is possible to finish the edges of the boards on one or both sides in postforming technology. The elements are resistant to high temperatures and moisture, so they can be used in ovens and cookers. The polymer film applied to their surface is resistant to scuffs and scratches. Complete Skin ribbons and boards exceed the quality and durability of elements made in traditional surface finishing technologies.
