

Maintenance instructions for MELACO products

1. All high-gloss MELACO products and some products with a matt surface are delivered with a polyethylene protective film. During processing, the protective foil should not be torn off, torn, incised or removed. Due to the possibility of damaging the surface of the decorative foil, it is not allowed to write on the protective foil. The solvents contained in the markers may damage the surface, and the paintwork may also be permanently dented. The time of removing the protective film depends solely on the customer's decision.
2. Delicate cleaning agents such as water or a water solution of soap or detergent with a delicate effect can be used to clean and maintain the products. It is important to follow the rule that before using the cleaning agent, carry out a test on a small, invisible part of the surface.
3. In particular, agents such as: scouring agents, agents containing acids, waxes, solvents and other chemically active substances cannot be used.
4. For cleaning, use delicate cloths, e.g. microfiber.
5. The use of steam devices for cleaning is prohibited because heated water vapor penetrating the structure of the surface can lead to permanent irreversible damage.
6. If the product is delivered with a protective film, remove it only after finishing furniture assembly.
7. If the surface is dirty or stained, remove the contamination immediately according to point 1. Stains left to dry may not be removable.
8. For cleaning and maintenance of products with a glossy surface, we recommend a special set ULTRA-GLOSS SUPERPOLISH+DGS, which contains a preservative, a sponge for applying the preservative and a delicate cloth for polishing the surface. Do not use the ULTRA-GLOSS SUPERPOLISH+DGS set for cleaning and maintenance of products with a surface other than high gloss.
9. We recommend cleaning products finished with a matt foil using a vinegar solution diluted with water in the proportion of 1:5 (dilute one part of vinegar with five parts of water).
10. Products made on the basis of MDF board dyed in the mass with milled foil on the right side are intended for home interiors such as living rooms, bedrooms, halls. The use of this type of product in the kitchen, bathroom or other room with increased humidity or direct exposure to water splashes at the Customer's own risk. When cleaning these types of products, be careful not to snag, scrape or pry the edges of the foil. Avoid splashing water directly on the surface with the exposed MDF board.
11. Before using the cleaning agent, it is necessary to carry out a test on a small, invisible part of the surface.
12. In case of any inquiries or comments regarding MELACO products, please contact the MELACO sales department.
